

Here's how to create a **Scatter Print** in Photoshop, that is useful for making custom sequins or adding glitter to your material.

- ▶ Starting in Photoshop, create your single motif that you want to **Define Pattern** using the **Edit** drop-down.

- ▶ Open a new file and press the shortcut keys **SHIFT + BACKSPACE**
- ▶ The Fill Pop-Up window will appear:

- ▶ Select: **Custom Pattern**
- ▶ Select: **Script > Random Fill**

- ▶ The **Random Fill** Pop-Up window will appear. You can modify settings like Density and Scale. We like to apply color randomness to get different high and low levels after desaturating to Black and White.

Here's the **Scatter Print** we created after using the plugin and desaturating. You can save this as a .PNG to apply it to any of your fabrics or materials.

Having a desaturated (Black & White) print will make it easier to recolor. It's even possible to add your new print as a Metal Map and make your new material a shiny foil!
